Sequence 5, Application US/09394455
Patent No. 6531305
GENERAL INFORMATION:
APPLICANT: Witman, George F.
APPLICANT: Mitman, George F.
APPLICANT: Leszyk, John D.
APPLICANT: Leszyk, John D.
TITLE OF INVENTION: SPERM ASSOCIATED PROTEIN KINASE POLYPEPTIDES, CORRESPONDING TITLE OF INVENTION: NUCLEIC ACIDS, AND METHODS OF USE FILE REPRENCE: 07911/07801
CURRENT APPLICATION NUMBER: US/0394,455
CURRENT APPLICATION NUMBER: US 60/099,771
PRIOR FILING DATE: 1999-09-10
NUMBER OF SEQ ID NOS: 56
SOFTWARE: FRAESEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               4

The present invention relates to the isolation of a human kinase and the polymucleotide sequences encoding it. The human kinase of the invention is related to the serine/threonine kinase subsamily. The gene encoding the human kinase subsamily. The gene encoding the human kinase is located on chromosome 5. The polymedide and disease or condition mediated by a human kinase. Both the polypeptide and polymucleotide sequences of the invention are useful for treating a disease or condition mediated by a human kinase. Both the polypeptide and polymucleotide sequences are useful as models for the development of human therapeutic agents, and as query sequences to development of human therapeutic agents, and as query sequences to perform a search against sequence date bases to identify other family members of related sequences. The polympeptide is useful to raise antibodise or to elicit another immune response, as a resident in seasys antibodise or to elicit another immune levels of the protein in biological fluids, as markers for tissues in which the corresponding protein is sepected to protein in its natural state.

CC designed to quantitatively determine levels of the protein in biological fluids, as markers for tissues in which the corresponding protein in the natural state, or an altered form that causes the specific disease or pathology associated with the kinase, to screen a compound for the ability to stimulate or inhibit interaction between the kinase protein, and in pharmacogenomic analysis. The polymucleotide is useful for a crivity of the human kinase gene in clinical trials or in a treatment regimen, in diagnostic assays for qualitative changes in a human kinase constructs to control human kinase gene expression, and to produce transgenic animals. The present sequence expression, and to produce transgenic animals. The present sequence containing cells a human kinase related to the serine/threamily.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Attention relates to a new isolated human kinase peptide. The human kinase peptide and nucleic acid molecules are useful in the development of human therapeutics and diagnostic compositions. The peptides are useful for treating disorders (e.g. cancers, inflammations, arteriosclerosis or psoriasis) characterised by an absence of, inappropriate, or unwanted expression of the kinase protein. These molecules are particularly useful as models for developing human therapeutic targets identifying therapeutic proteins or serving as targets for the development of human therapeutic agents that modulate kinase activity in cells and tissues that express the kinase. The peptides are also useful for raising antibodies or eliciting an immune responses as a reagent (including the labelled reagent) in assays designed to quantitatively determine levels of the protein (or its binding partner or ligand) in biological fluids; or as markers for the agents in which the corresponding protein is preferentially expressed. The agents identified are useful for treating a subject with a disorder mediated by kinase pathway. The present sequence represents cDNA encoding

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present cDNA sequence, the coding region of which is also claimed, encodes a novel human protein kinase, designated 14911 (see AAM50334). This protein kinase plays a role in, or functions in, the transduction of signals for cell proliferation, differentiation and apoptosis, modulating the activity of one or more proteins involved in cellular growth or differentiation. 14911 molecules are overexpressed in some tumour cells, where they may inappropriately propagate either cell proliferation or cell survival signals. The invention provides methods for the diagnosis and treatment of cancer, including breast colon, brain and especially

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      766
lung cancer (claimed), and methods for evaluating the efficacy of treatment. 14911 nucleic acids are useful in diagnostic, screening and gene therapy methods, for recombinant protein production, in the design of probes and primers, as a pharmacogenomics marker, and in the breeding of transgenic animals in which a 14911 gene is introduced or disrupted. Antisense 14911 and ribozyme molecules are used in a claimed method of treating cancer or a cellular proliferation and/or differentiation disorder. In addition to cancer, such disorders include those associated with bone metabolism, autoimume diseases, cardiovascular disorders, liver disorders, viral diseases, pain and metabolic disorders,

The present invention relates to human kinases (PKIN) and polynucleotides encoding such proteins. PKIN sequences of the invention are useful for disponeing, treating or preventing disorders associated with aberrant expression of PKIN, particularly immune system disorders (e.g. acquired immune deficiency syndrome (AIDS) thymic hypoplasia, Crohn's disease, ansemia, asthma), neurological disorders (e.g. epilepsy, Charcot-Marie-Tooth disease or seizures), cell proliferative disorders (e.g. cancers such as adenocarcinoma, leukaemia, lymphoma, melanoma, myeloma, sarcoma), and developmental disorders (e.g. bown's syndrome). They are also used in human PKIN-20 protein therapy. The present sequence is a cDNA encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

The invention relates to novel human protein (MHP) kinases and their corresponding cDNA molecules. MHP kinase and its DNA are useful as cagents in assays for screening compounds that can be used as the content of mental, plantacettical reagents useful in the therapeutic treatment of mental, biological and medical disorders, and also as chemotherapeutic agents useful in the treatment of breast cancer and prostate cancer. NHP DNA is useful for diagnosis, drug screening, clinical trial monitoring, the treatment of physiological disorders or diseases, and cosmetic and treatment of physiological disorders or diseases, and cosmetic and the mapping of a unique gene to a particular chromosome. MHP DNA is further useful as hybridisation probes for chromosome. MHP DNA is further useful as hybridisation probes for the detection of mutant NHPs or inappropriately expressed NHPs for disease diagnosis. NHP DNA is also useful in gene therapy. The present constituent protein kinases, thosomal protein kinases and camper. The dependent kinases cDNA related to the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GACCACTITIGAAAITITIGCGAGCCATIGGGAAAGGCAGTITITIGGAAAGGTCTGCATIGTA 120

The invention relates to novel human protein (MHP) kinases and their corresponding cDNA molecules. NHP kinase and its DNA are useful as reagents in assays for screening compounds that can be used as tharmaceutical reagents useful in the therapeutic treatment of mental, biological and medical disorders, and also as chemotherapeutic agents useful in the treatment of breast cancer and prostate cancer. MHP DNA is useful for disgnosis, drug screening, clinical trial monitoring, the treatment of physiological disorders or diseases, and cosmetic and nutriceutical applications. NHP DNA is also useful for the identification of coding sequence and the mapping of a unique gene to a particular chromosome. NHP DNA is further useful as physiological diseases and also for screening libraries and assessing gene expression patterns, and also for the detection of mutant NHPs or inappropriately expressed NHPs for disease diagnosis. NHP DNA is also useful in gene therapy. The present sequence is novel human protein (NHP) kinase full-length ORP (Open reading frame) and flanking region DNA related to the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         411 CCATGGGAGCCAACACTTCAAGAAAACCACCAGTGTTTGATGAAAATGAAGATGTCAACT

/\*tag= a /product= "Novel human protein (NHP) kinase"

```
The invention relates to novel human protein (MHP) kinases and their corresponding cDNA molecules. NHP kinase and its DNA are useful as reagents in assays for screening compounds that can be used as pharmaceutical reagents useful in the therapeutic treatment of mental, biological and medical disorders, and also as chemotherapeutic agents cuseful in the treatment of breast cancer and prostate cancer. NHP DNA is useful in the treatment of breast cancer and prostate cancer. NHP DNA is cuseful in the treatment of breast cancer and prostate cancer. NHP DNA is creatment of physiological disorders or disasses, and cosmetic and custicular conformage and the mapping of a unique gene to a particular chromosome. NHP DNA is further useful as hybridisation probes for chromosome. NHP DNA is further useful as hybridisation probes for screening libraries and assessing gene expression patterns, and also for the detection of mutant NHPs or inappropriately expressed NHPs for General disease diagnosis. NHP DNA is also useful in gene therapy. The present sequence is novel human protein (NHP) kinase cDNA which is similar to sequence is novel human protein (shownal protein kinases and cAMP-condependent kinases cDNA related to the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180

protein kinases have been identified manipulation of the tyrosine or serine/threonine kinases (FTK and STK) families. The polynucleotides enconcing protein kinases and the polymptides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate kinase expression. For example, they may be used to treat cancers (especially cancers of haematopoletic origin), cardiovascular cancers (especially cancers of haematopoletic origin), cardiovascular cancers (especially cancers of haematopoletic origin), cardiovascular cancers (especially cancers of haematopoletic origin), neurological immune related diseases (e.g. rheumatoid arthritis), neurological cancers (e.g. schizophremia), neurodegenerative disorders (e.g. disorders), parkinson's disease (e.g. rheumatory disorders (e.g. asthma), infectious disease (e.g. HIV) and reproductive disorders (e.g. infertility).

Additionally, polymucleotides encoding protein kinases may be used for gene therapy and as DNA probes in disquostic assays. The protein kinase polypoptides may be used as antigens in the production of anthodies against the protein kinases and in assays to identify modulators of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            422

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA0574 represent mucleic caids encoding them. The sequences ABA08225-ABA0574 represent mucleic caids encoding them. The currention also relates to vectors and recombinant host calls comprising a mucleotide of the invention. The producing the novel polypeptides of the invention. Although novel, many of the note polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence to polypeptides of the invention by the polypeptides of the invention may differential therapeutic applications. The polypeptides of the invention activities, including cytokine, cell proliferation or cell differentiation activities, including cytokine, cell proliferation or cell ferentiation activities, including cytokine, cell proliferation or chemokinetic activities; haemostatic, thromoculatory activity, issue growth activity; compacted activities; haemostatic or chemokinetic activities; haemostatic, thromoculatory activities; haemostatic, thromoculatory activities; preventing, treating or amalorating may be useful for preventing, treating or amalorating medical activities; preventing them may be used to promote wound the invention are useful for preventing, treating or amalorating medical accivities and proliferative returnopathy, atherosclarosis, coronary heart disease, proliferative returnopathy, atherosclarosis, coronary heart disease, arterial inchaemia, bone disorders (e.g., myeloid or lymphoid cell growth. Polypeptides and ulcers), while those whum healing (e.g., of burns, incisions and ulcers), while those which activities and publy peused in the treatment of viral, bacterial and fungal infections in addition to immune disorders energates or accidental damage. The polypeptides may be used in the dam
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

The invention relates to novel human protein (MHP) kinases and their corresponding cDNA molecules. NHP kinase and its DNA are useful as cagents in assays for screening compounds that can be used as to pharmaceutical reagents useful in the therapeutic treatment of mental, biological and medical disorders, and also as chemotherapeutic agents cuseful in the treatment of breast cancer and prostate cancer. NHP DNA is useful in the treatment of breast cancer and prostate cancer. NHP DNA is cuseful for diagnosis, drug screening, clinical trial monitoring, the treatment of physiological disorders or diseases, and cosmetic and committee of coding sequence and the mapping of a unique gene to a particular of coding sequence and the mapping of a unique gene to a particular chromosome. NHP DNA is further useful as hybridisation probes for screening libraries and assessing gene expression patterns, and also for the detection of mutant NHPs or inappropriately expressed NHPs for disease diagnosis. NHP DNA is also useful in gene therapy. The present sequence is novel human protein (NHP) kinase cDNA which is similar to serine/threonine protein kinases, cDNA related to the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

The invention relates to novel human protein (NHP) kinases and their corresponding cDNA molecules. NHP kinase and its DNA are useful as reagents in assays for screening compounds that can be used as pharmaceutical reagents useful in the threatent of mental, biological and medical disorders, and also as chemotherapeutic agents useful in the treatment of breast cancer and prostate cancer. NHP DNA is useful for diagnosis, drug screening, clinical trial monitoring, the treatment of physiological disorders or diseases, and cosmetic and utriceutical applications. NHP DNA is also useful for the identification of coding sequence and the mapping of a unique gene to a particular chromosome. NHP DNA is further useful as hybridisation probes for creening libraries and assessing gene expression patterns, and also for the detection of mutant NHPB or inappropriately expressed NHPB for disease diagnosis. NHP DNA is also useful in gene therapy. The present engagenes is novel human protein (NHP) kinase CDNA which is similar to sequence is novel human protein (NHP) kinase CDNA which is similar to

The activity of polynucleotides of the invention may be described as, vulnerary, neuroprotective, immunomodulator, cytostatic and anti-inflammatory. Compositions comprising nucleic acids of the invention are useful for treating a mammalian subject, or as nutritional sources or useful for treating a mammalian subject, or as nutritional sources or useful for treating a mammalian subject, or as nutritional sources or useful in gene therapy, particularly for treating wounds, burns or ulcers, Alzheimer's disease, Huntington's disease, inflammation. The nucleic acids and polypeptides are also useful in diagnostic and research methods. The sequences given in records ABQ60788-ABQ61233 represent polynucleotides of the invention. NOTE: The sequence cate for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          482
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CAGAAGAATGATACCAAGAAGATGTGCGCAATGAAGTACATGAATAAACAAAAGTGCGTG 182

Nucleic acids encoding kinase polypeptides, useful for diagnosing and treating immune-related diseases and disorders, cardiovascular disease, neurodegenerative diseases and/or cancers.

Example 1; Fig 2; 310pp; English

and the procein kinases they encode may be used in the treatment and diagnosis of diseases associated with inappropriate kinase expression such as immune-related diseases and/or cancers, cardiovascular disease, neuclador as immune-related diseases and/or cancers. The nucleic acids and neurodegenerative diseases and/or cancers. The nucleic acids and cassays. The kinase polypeptides may be used as antigens in the production of assays. The kinase polypeptides may be used as antigens in the production of annibodies of kinase expression and activity. Anti-kinase antibodies and kinase antagonists may also be used to down regulate kinase activity. Diseases related to kinase expression and activity include rheumatoid arthritis, atherosclerosis, autoimmune disorders, complications of organ transplantation, myocardial infarction, immune disorders, cardiomyopathies, strokes, renal failure, oxidative-citeress related disorders, chronic inflammatory pelvic disease, multiple sclerosis, asthma, osteoarthritis, portiasis, rhinitis, autoimmunity, diabetes, cancers and reproductive present sequence encodes a novel protein kinase. The nucleic acids disorders

```

The invention relates to a method for diagnosing insulin resistance (IR), an IR-related condition, or susceptibility to IR or an IR-related condition, or susceptibility to IR or an IR-related condition in a patient. The method comprises detecting a difference in expression of at least one insulin resistance marker (IRM) in a biological sample from the patient, compared to the level of expression of the IRM in reference individuals who are not insulin resistant. The invention also encompasses screening for an agent to determine its usefulness in treating IR; the identification of a polymorphism section with an IR phenotype or risk of developining IR; estimating the frequency of a haplotype for a set of nucleotide polymorphism markers in a population; detecting an association between a haplotype and a phenotype; and identifying genes associated with a disease state. The methods of the invention are useful for diagnosing insulin resistance (IR), an IR-related condition, or susceptibility to IR or an IR-related conditions include hypertension, dysalpidaemia, types 2 diabetes, obesity or coronary artery disease. The methods are also useful in screening for agents useful in the treatment of these disorders. The in screening for agents useful in the treatment of these disorders. The shown in the specification, but was obtained from GenBank using the shown in the specification, but was obtained from GenBank using the accession number listed in Table 1 (page 25-33).

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
